## OFFICIAL WHITEPAPER

DEC 5

# SCOPE OF VETTER PLATFORM

## Where Crowdsourcing Meets A.I. to Empower the Crypto Investor

Vetter Platform is the first tokenized crypto research tool deriving its knowledge-base from crowdsourcing.

We've proven the model long before developing the token, and integrated gamification and A.I. bringing you this next-gen ecosystem and investor-research tool for crypto presales, fairlaunches, and ICOs. This positions Vetter as a disruptive front-runner in the crypto-research market— across all networks and with many applications.

### PROVEN USE-CASE

Vetter's crowdsourcing model was beta-tested thoroughly in the open market for 90-days prior to evolving into Vetter dApp.

Here's a **snapshot of results** reported by real investors who use the research-tool at Tribe 100x:

[Reported Results 1](#) / [Results 2](#) / [Results 3](#)

# WHAT'S CROWDSOURCING & A.I. REALLY MEAN?

## PROBLEM & SOLUTION

It's time-consuming to research all the crypto presales, fair-lanches and ICOs launching on a given day to spot the next 2x, 10x, 100x, or more.

Crowdsourcing helps solve this. It allows a large number of people to contribute a small amount of time to research crypto projects while giving everyone access to the collective knowledge-base. This exponentially reduces the amount of time it takes to search for crypto gems.

Crowdsourcing has limitations, though. How do you prevent people from shilling and spamming so that the quality of information shared is stellar and accurate? And how do you collate this data so the 'cream' (best crypto projects) floats to the top?

We've combined the power of crowdsourcing with A.I. and a feature-rich dApp to solve these problems for the first time. We added gamification—making it fun, fast, and easy to spot crypto projects worthy of consideration, while removing frustration for the crypto investor.

# GAMIFICATION

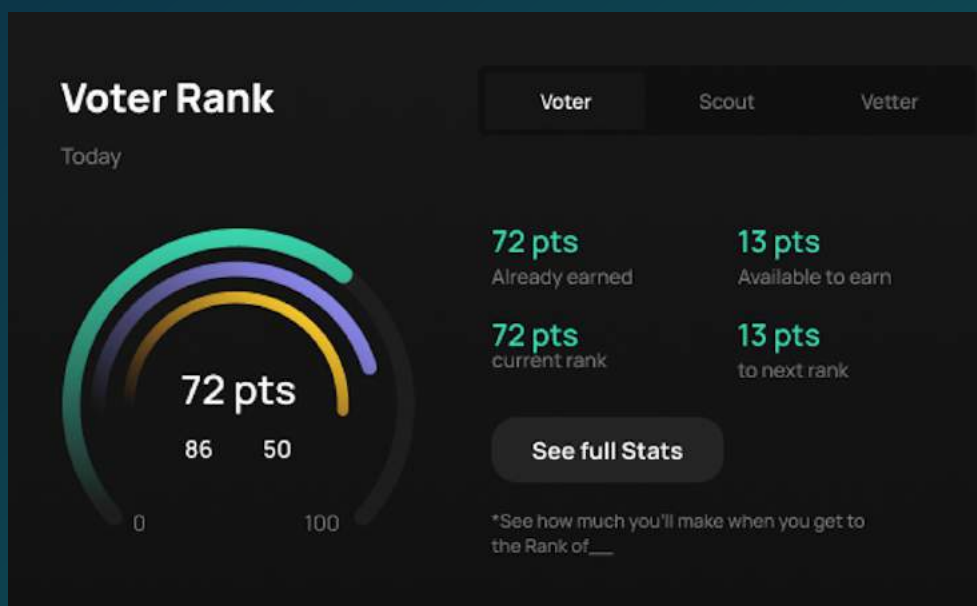

## Scoring, Ranking, Compensation and Incentivization

Most crypto investors are NOT trained investors. So if it's not fun, they're probably not going to do it. That's why we've added gamification to the research process— with Scoring, Ranking, Compensation, and Incentivization.

### COMPENSATION & INCENTIVIZATION

Vetter holders are incentivized to help the community spot crypto gems using Vetter's unique tokenomics.

A Vetter Token holder is compensated by participating as a Voter, Scout, or Vetter— or all three! Learn more by watching the 'Ranking & Compensation' presentation found [on this page](#).

# GAMIFICATION

## SCORING & RANKING

Vetter's comprehensive A.I. uses a scoring and ranking system to reward users who are best at identifying crypto projects that perform well.

The higher one's rank, the more they get paid as a Voter, Scout, or Vetter.

### **DO ALL TOKEN HOLDERS HAVE TO CONTRIBUTE?**

It's not required to participate as a Voter, Scout, or Vetter to benefit from Vetter Platform.

Investors not interested in getting compensated for contributing can still use the Platform as their #1 crypto research tool to identify crypto presales, fairlaunches, and ICOs most worth considering.

### **POSITIONED TO LEAD INVESTOR RESEARCH TOOLS MARKET ACROSS ALL CRYPTO NETWORKS**

Since our A.I. and crowdsourcing model can also be applied to micro-caps, NFTs, and other emerging markets— investors hodl'ing Vetter can anticipate great returns via ongoing developments.

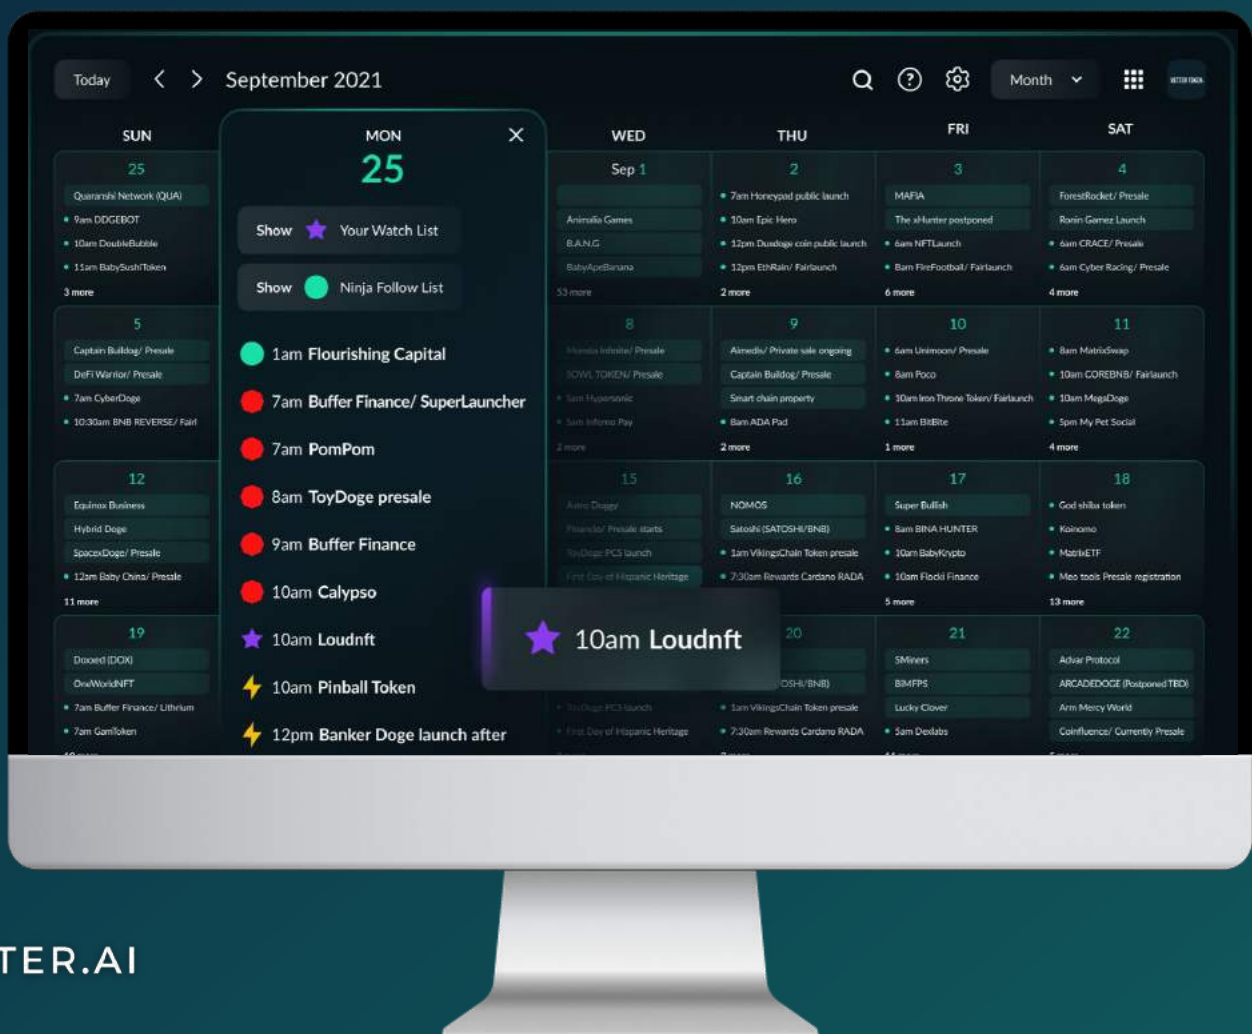

# CRYPTO PRESALE CALENDAR

## SPOTTING THE 100x

When Scouts post projects to the calendar, Veters can post additional research-data on the project. Once the project launches, Voters indicate if the project was successful within a 24-hour, 7-day, 30-day, or "all-time" time-frame.

This allows investors to use the calendar to sort for projects most likely to perform well within specific time-frames to fit their personal investment goals— we call this feature the **Intuitive Oracle**.

# DASHBOARD

## THE dAPP

With so much packed into one research tool, we've placed high priority on our user-interface and the user-experience.

The dashboard incorporates scoring, ranking, voting, and gamification to make it fun— while displaying the [scoring and ranking] incentives for holders so they contribute to the project by getting compensated.

This provides investors with the single best crypto research tool on the market— accessible from one, simple, intuitive dashboard.

Want to be FIRST to see this working dashboard? Be sure to [follow our Telegram!](#)

# EDUCATIONAL RESOURCE

## Video Vault

Vetter's ability to onboard new crypto investors struggling to navigate the Defi world will greatly impact upward price momentum.

We do it by providing simple 'how-to' videos that quickly get a new investor set up on the BSC, or other networks (Cardano, Solana, Matic, etc.) so they can participate in a presale, fairlaunch, private sale, and understand the difference.

While many of us refer to YouTube for this guidance, the mainstream doesn't know what to search for or where to start. Vetter's Video Library makes it easy!

# TOKENOMICS

## CONTRIBUTOR REWARDS ECOSYSTEM

The value of Vetter Token is directly tied to the value the Platform brings to crypto investors— saving them time while enhancing results.

Vetter's Tokenomics are designed to reward its crowd-sourced contributors to bring investors the most advanced research tools on the market.

Because it's tied to the tax, the amount of Vetter Token paid to Voters, Scouts and Vettors is variable depending upon the volume of buy and sell orders. It's also dependent on what the Vetter A.I. determines is needed, day-to-day, to incentivize the right behavior so we maximize the value Vetter brings to investors.

For example, if Vetter A.I. sees that we have too many posts on the calendar about project launches from users with lower ranking scores— it will decrease what it's paying to those at those lower ranking scores and shift those resources to pay and offer more to contributors with higher ranking scores.

# TOKENOMICS

On the next page you'll see an illustration of the buy/sell taxes associated with Vetter Token.

Because Vetter is committed to crushing the competition in the crypto-research market, with plans to expand immediately after launch into new markets— a 5% buy/sell tax is committed to the Marketing/Dev wallet for ongoing development.

The Participatory tax allows us to pay Voters, Scouts and Vettors who are contributing to the dynamic process.

The Vetter Pool provides additional incentives for Vettors, who provide a deeper analysis on the projects.

Royalty Reflections provide life-long royalties to those who contributed value as a Scout (by loading crypto projects to the calendar).

The Liquidity tax helps stabilize the price-floor.

*See visual allocations on next pages...*

# TOKENOMICS

## Token Distribution

Vetters' tokenomics are unlike typical BSC projects that give reflections to all holders simply for holding the token. We believe the perceived value of such tokenomics is running out of steam. It is very difficult to get listed on CEX's because of it's design, and the 'hype-o-meter' is off the charts giving the BSC a negative image.

In Vetter's case, the tokenomics are straight-forward, and can be far more easily applied to CEX's. In addition, they are in line with the purpose of the blockchain, awarding those who bring value to the project.

# TOKENOMICS

## Token Allocation

- 4,000,000,000 Tokens Generated
- 200,000,000 Founders (locked 1 yr, vested 10% per mo. after)
- 200,000,000 Stabilizer Pool for Diamond Hands (see [this video](#))
- 654,545,455 to LP
- 654,545,455 to Presale Allocation
- 2,290,909,091 Private Allocation

\*Same Token Price on Private, Presale and PancakeSwap Launch

\*\*Extreme measures taken to stabilize price-floor at launch

## MarketCap at Launch

- 2,475,000 with BNB at \$405
  - \* This is based on BNB at \$405 on Oct 10th.  
MC subject to change based on cost of BNB
- \$0.000618750 price per token

## Presale Softcap/Hardcap

- 1000 SC
- 1000 HC
- 100% Locked to Liquidity for 6-months

# CONTRACT

BSC Contract Address:

0x6169b3b23e57dE79a6146A2170980cEb1F83b9e0

View on **BSCscan** [[Click here](#)]

 Never send BNB to contract address. [Learn More](#)

When purchasing a cryptocurrency that is already available on an exchange, never send BNB (or any type of cryptocurrency) directly to the contract address.

You can purchase Vetter token directly on PancakeSwap.

 Not designed for wallet transfers. [Learn More](#)

Vetter is not designed to be sent from wallet-to-wallet. You will get taxed if you do. The reason for this is Vetter token is designed to create a high standard of efficacy (research results) on the platform. Without this tax, those with ill-intent could set up multiple accounts without limits, and vote as if they represented dozens or hundreds of people.

This would sway results on crypto projects incorrectly. If you send the tokens from your wallet you will be taxed and there is no way to recover these tokens. Watch Demo to see how Vetter platform works!
